EDUCATION

University of South Florida – M.S., Computer Science

May 2027

- GPA: 4.0/4.0

University of South Florida – B.S., Computer Science

May 2026

- GPA: 3.9/4.0
- Honors: Presidential Honors Scholarship, Honors Medallion, 8x Dean's List

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, TypeScript, HTML/CSS, C/C++, C#, SQL
- **Web:** Angular, React, Node.js, .NET, REST APIs
- **AI/ML:** PyTorch, OpenCV, NumPy, scikit-learn, Matplotlib
- **Infra & Tools:** Git, Linux, PostgreSQL, SLURM/HPC, ROS2, Chrome Extensions (MV3), Docker
- **Spoken Languages:** English (Fluent), Portuguese (Native), Spanish (Advanced), Japanese (Lower-intermediate)

EXPERIENCE

ClearSet.AI

May 2025 – Dec 2025

Software Engineering Intern

- Built 30+ reusable Angular/TypeScript UI components (e.g., data tables, form builders, dashboards) that became the shared base for 6+ product features.
- Fixed 50+ bugs across the full application stack, from the C# .NET backend to the Angular frontend, implementing unit testing to improve system reliability and contributing to a 15% decrease in critical support tickets.
- Wrote the SQL migrations for 4 feature rollouts and 10+ production data fixes, all deployed with zero downtime across 20,000+ user records.

Please Don't Scroll | [Live Site](#)

Jun 2026 – Present

Founder

- Designed, built and shipped a Manifest V3 Chrome extension published to the Chrome Web Store, a web dashboard and a Postgres backend, sharing one dependency-free JavaScript core so auth, sync and URL-matching logic live in a single place.
- Wrote 138 zero-dependency unit tests on Node's built-in runner, covering URL-matching rules and the exact shape of every REST call via a mocked fetch.
- Automated extension releases with a packaging script that strips dev-only origins, prunes unreferenced files and fails the build on any broken reference, cutting the shipped bundle from 2.45 MB to 83 KB.

RESEARCH

University of South Florida

Jan 2026 – Present

Graduate AI & CV Researcher

- Co-first author, ICLR 2027 submission (with Dr. Utkarsh Ojha): showed real and AI-generated images remain separable under extreme abstraction (edge maps, heavy blur/downsampling) across 10 datasets, suggesting detectors rely on global composition rather than local artifacts.
- Trained 400+ binary classifiers across 9 architectures (ResNet, DenseNet, SRNet, ViT, and 5 CNN variants) on CelebA, FFHQ, ImageNet, and generated datasets, running 1,000+ GPU-hours of SLURM jobs on USF's HPC cluster.

RARE Lab

Nov 2025 – Apr 2026

Undergraduate CV & Robotics Researcher

- Built real-time projector-camera compensation for the Unitree Go2 quadruped (OpenCV, PyTorch, ROS2), reducing projection distortion on irregular surfaces by ~70% at 24 FPS for navigation in simulated disaster environments.
- Set up an Ubuntu 20.04 VM setup on Apple Silicon that resolved ROS2 networking issues with the robot's peripherals.

ORGANIZATIONS

Google Developer Group

Jan 2025 – May 2025

Community Chair

- Led planning for HackUSF 2025 (300+ participants), managing 10+ organizers, timeline and logistics, and budget of \$5,000.
